The Four Seasons

autumn September October November	winter December January February
spring March April May	summer June July August

seasons

In the UK, there are four seasons each year. They are spring, summer, **autumn** and **winter**.

autumn

In **autumn**, the temperature begins to get lower and it can be quite chilly and windy. It starts to get darker earlier in the day. Some animals get ready to hibernate and some types of trees lose their leaves.

winter

Winter is the coldest season of the year. It can be very rainy and windy and it might even snow. Not many flowers are in bloom during winter and lots of trees have lost all their leaves. Some animals hibernate during **winter** and many are less active than in the warmer months.

weather

The **weather** includes the temperature outside, how windy it is and rainfall (how much it rains). We can also describe cloud, snow and sun.

daylight

Daylight is when it is light outside. The amount of **daylight** changes with each **season**.

spring

In **spring**, the **weather** starts to get warmer. Leaves begin to grow and some trees may blossom (have flowers). Days start to have more **daylight** hours.

summer

In **summer**, the **weather** gets hotter. Days in **summer** have the most **daylight** hours. Trees are full of leaves and there are lots of flowers, bees, butterflies and other insects.
